

## Remote Monitoring Services

Spinitar is unique in the audiovisual industry in that we have a dedicated team of internal IT personnel that can remotely monitor and manage your audiovisual system on a regular basis. With our remote monitoring services, we can prevent potential system downtime, monitor projector lamp life, remotely troubleshoot system components, optimize room usage, and more.

## Top 5 Benefits of Remotely Monitoring Audiovisual Systems

- System Health Monitoring** → We can remotely monitor the overall health of your audiovisual system, including projector lamp hours, remaining lamp life, and more
- Remote Troubleshooting** → We can remotely troubleshoot system components and immediately notify you with information on system status
- Forecasting/Reporting** → We can provide a detailed report about overall system usage, enabling you to track, plan and budget your audiovisual system investments
- Downtime Prevention** → We can track system usage and notify you when components need to be replaced to prevent potential system downtime
- System Optimization** → We can provide you with information on how to make the most of your system and efficiently plan system and/or room usage
